COVID-19 subject H2102040519

2021-05-05

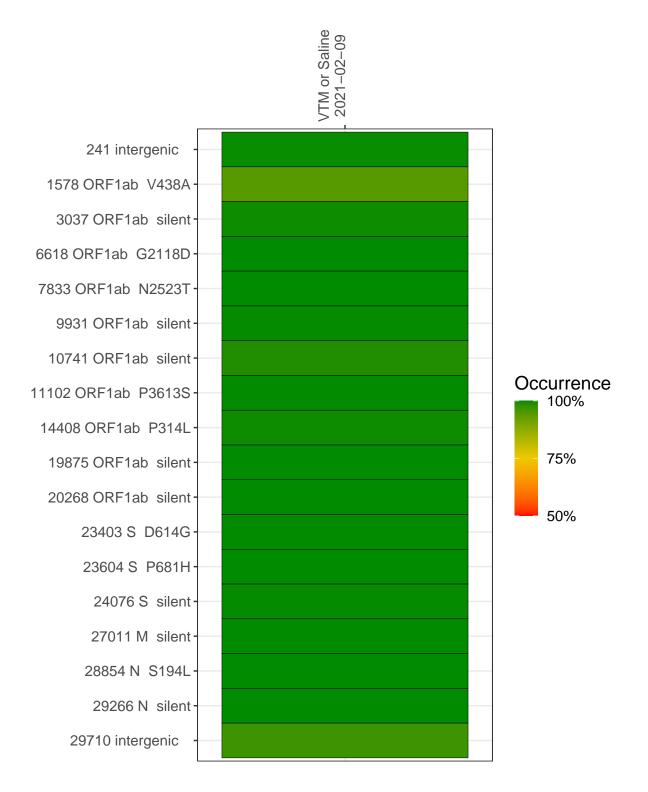

The table below provides a summary of subject samples for which sequencing data is available. The experiments column shows the number of sequencing experiments performed for each specimen. Experiment specific analyses are shown at the end of this report. Lineages are called with the Pangolin software tool (Rambaut et al 2020) for genomes with > 90% sequence coverage.

Table 1. Sample summary.

Experiment	Туре	Genomes	Sample type	Sample date	Largest contig (KD)	Lineage	Reference read coverage	Reference read coverage (>= 5 reads)
VSP0666-1	single experiment	NA	VTM or Saline	2021-02-09	29.60	B.1.243	99.8%	99.7%

Variants shared across samples

The heat map below shows how variants (reference genome /home/everett/projects/SARS-CoV-2-Philadelphia/Wuhan-Hu-1) are shared across subject samples where the percent variance is colored. Variants are called if a variant position is covered by 5 or more reads, the alternative base is found in > 50% of read pairs and the variant yields a PHRED score > 20. Gray tiles denote positions where the variant was not the major variant or no variants were found. The relative base compositions of each experiment used to calculate tiles are shown in the following plot where the total number of position reads are shown atop of each plot.

VTM or Saline 2021-02-09

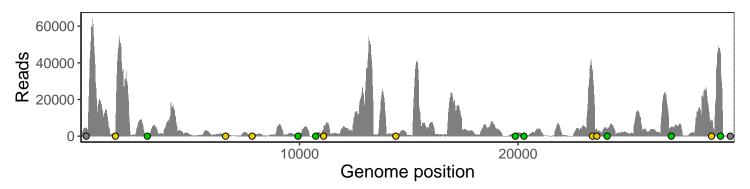

241 intergenic	4239				
1578 ORF1ab V438A	614				
3037 ORF1ab silent	1254				
6618 ORF1ab G2118D	717				
7833 ORF1ab N2523T	683				
9931 ORF1ab silent	1764				
10741 ORF1ab silent	1209				
11102 ORF1ab P3613S	3813				
14408 ORF1ab P314L	1630				
19875 ORF1ab silent	1231				
20268 ORF1ab silent	155				
23403 S D614G	35843				
23604 S P681H	3860				
24076 S silent	3550				
27011 M silent	4648				
28854 N S194L	8771				
29266 N silent	43560				
29710 intergenic	64				
	VSP0666-1				

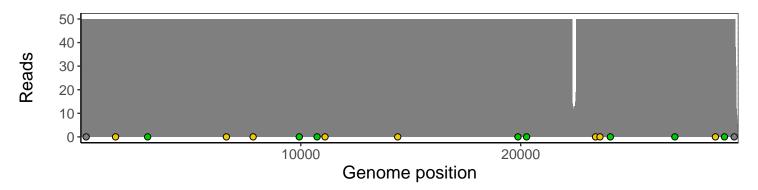

Analyses of individual experiments and composite results

$VSP0666\text{-}1 \mid 2021\text{-}02\text{-}09 \mid VTM \text{ or Saline} \mid H2102040519 \mid genomes \mid single \text{ experiment}$

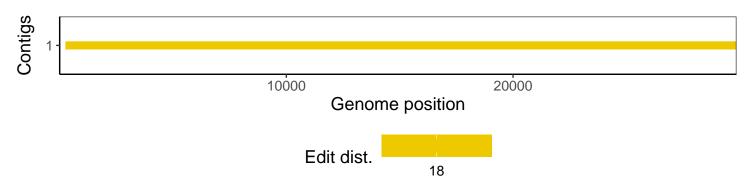

The plot below shows the number of reads covering each nucleotide position in the reference genome. Variants are shown as colored dots along the bottom of the plot and are color coded according by variant types: gray - transgenic, green - silent, gold - missense, red - nonsense, black - indel.

Excerpt from plot above focusing on reads coverage from 0 to 50 NT.

The longest five assembled contigs are shown below colored by their edit distance to the reference genome.

Software environment

Software/R package	Version
R	3.4.0
bwa	0.7.17-r1198-dirty
