# COVID-19 subject 210

2020-08-13

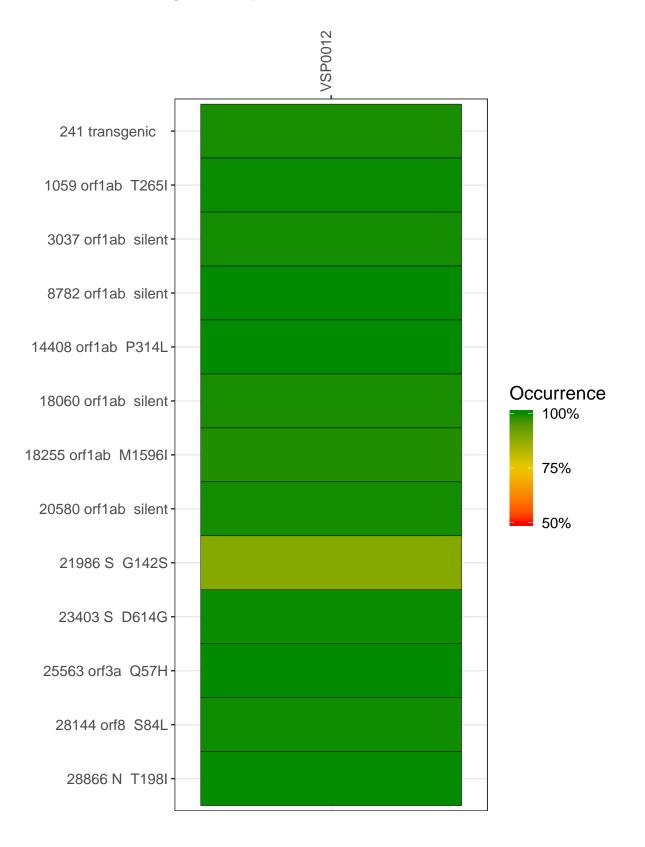

The table below provides a summary of subject samples for which sequencing data is available. The experiments column shows the number of sequencing experiments performed for each specimen. Experiment specific analyses are shown at the end of this report.

Table 1. Sample summary.

Experiment	Type	Input genomes	Sample type	Sample date	Largest contig (KD)	Reference read coverage	Reference read coverage (>= 5 reads)
VSP0012 VSP0012-1a	composite single experiment	NA 132000	ETA ETA	4/8/2020 4/8/2020	29.86 0.46	99.8% 50.8%	99.7% 26.0%
VSP0012-1a VSP0012-1b	0 1	132000	ETA	4/8/2020	0.42	28.7%	11.3%
VSP0012-2	single experiment	660000	ETA	4/8/2020	29.86	99.8%	99.6%

#### Variants shared across samples

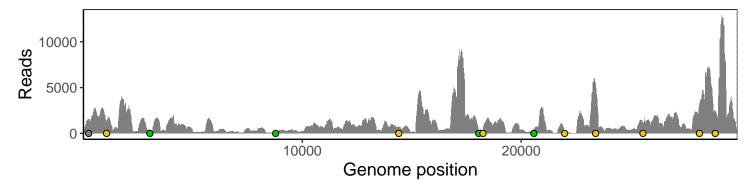

The heat map below shows how variants are shared across subject samples. The quality scores are PHRED scaled values  $[Q = -10\log 10 (error\ rate)]$  where a score of 30 represents a probabilty of 99.9% that a variant is called correctly and a score of 50 represents a probabilty of 99.999% Gray tiles denote that 10 or more reads covered the variant position and the reference base was observed. Tiles are ommitted if there are less than 10 reads covering a variant position.

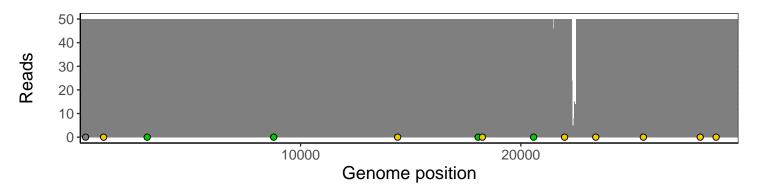

## Analyses of individual experiments and composite results.

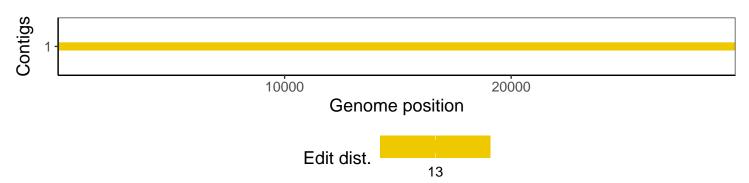

### VSP0012 | 4/8/2020 | ETA | 210-tri | composite result

The plot below shows the number of reads covering each nucleotide position in the reference genome (USA-WA1-2020). Variants are shown as colored dots along the bottom of the plot and are color coded according by variant types: gray - transgenic, green - silent, gold - missense, red - nonsense, black - indel.

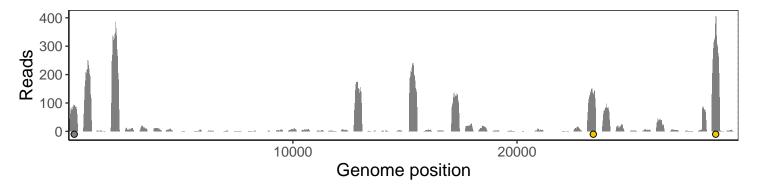

Excerpt from plot above focusing on reads coverage from 0 to 50 NT.

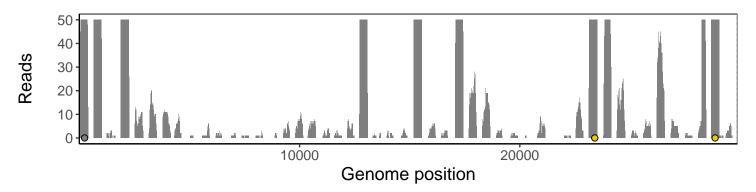

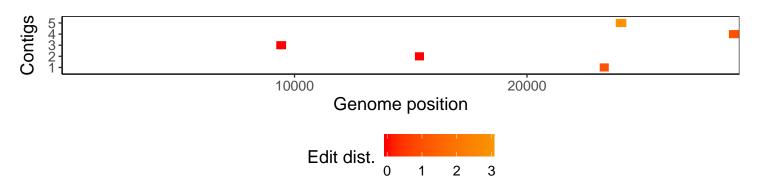

#### VSP0012-1a | 4/8/2020 | ETA | 210-tri | 132000 genomes | single experiment

The plot below shows the number of reads covering each nucleotide position in the reference genome (USA-WA1-2020). Variants are shown as colored dots along the bottom of the plot and are color coded according by variant types: gray - transgenic, green - silent, gold - missense, red - nonsense, black - indel.

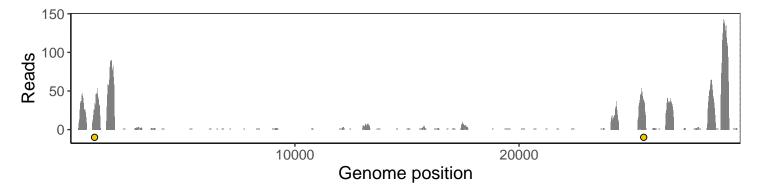

Excerpt from plot above focusing on reads coverage from 0 to 50 NT.

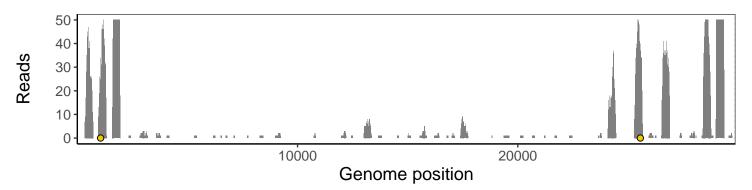

#### VSP0012-1<br/>b | 4/8/2020 | ETA | 210-tri | 132000 genomes | single experiment

The plot below shows the number of reads covering each nucleotide position in the reference genome (USA-WA1-2020). Variants are shown as colored dots along the bottom of the plot and are color coded according by variant types: gray - transgenic, green - silent, gold - missense, red - nonsense, black - indel.

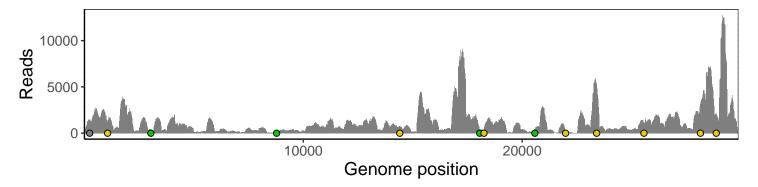

Excerpt from plot above focusing on reads coverage from 0 to 50 NT.

#### VSP0012-2 | 4/8/2020 | ETA | 210-tri | 660000 genomes | single experiment

The plot below shows the number of reads covering each nucleotide position in the reference genome (USA-WA1-2020). Variants are shown as colored dots along the bottom of the plot and are color coded according by variant types: gray - transgenic, green - silent, gold - missense, red - nonsense, black - indel.

Excerpt from plot above focusing on reads coverage from 0 to 50 NT.
